THE EFFECTIVE WAY TO COOL YOUR PRODUCTS SELECTIVELY AND GENTLY

- Can be custom fitted into any available space due to its flexibility in floor space and height
- Easy integration into existing production lines; continuous product flow
- Chain width is 72 550 mm: transport of up to five product lanes is possible
- Shallow channels ensure safe transport, keeping products on track
- Low operational noise level
- Each slat can be replaced separately
- High product capacity: chain lengths of up to 1,000 m
- Easily adapted to all existing cooling mediums
- Cooling equipment available in radial or axial design

- Cooling cells made of plastic profile or pre-engineered expanded polyurethane sandwich elements, non-CFC expansion, inside surface nickel chrome steel
- Low operating power max. 4 kW
- Driving principle, refrigerating capacity management and highly effective insulation leads to excellent energy efficiency
- Low operational costs
- Improved product quality and durability due to well-defined and gentle cooling methods
- The HELIFLEX Flow Cooler has proved itself over many years in the production of cheese spread, cream cheese, fondue cheese, pies, chocolate coating and cosmetics

single components or as a complete system. Experienced teams realising innovative solutions

PERFECT CUSTOMISED SOLUTIONS

- Consultation project development construction
- Complete installation (mechanical, electrical)
- Integration of upstream and downstream equipment
- Includes control units and interfaces

- Operator training
- Commissioning
- Turn-key projects
- Maintenance repair spare parts service

In our modern production facilities we design, construct and assemble conveying technology as with first-class equipment have made DMA into an internationally acknowledged brand. DMA is recognised as a valuable partner by all its customers.

HELIFLEX FLOW COOLING SYSTEMS

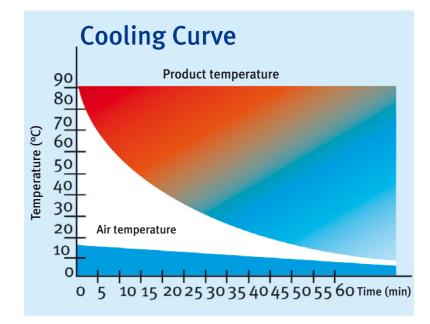

The HELIFLEX Flow Cooler is distinguished by its compact and enclosed design.

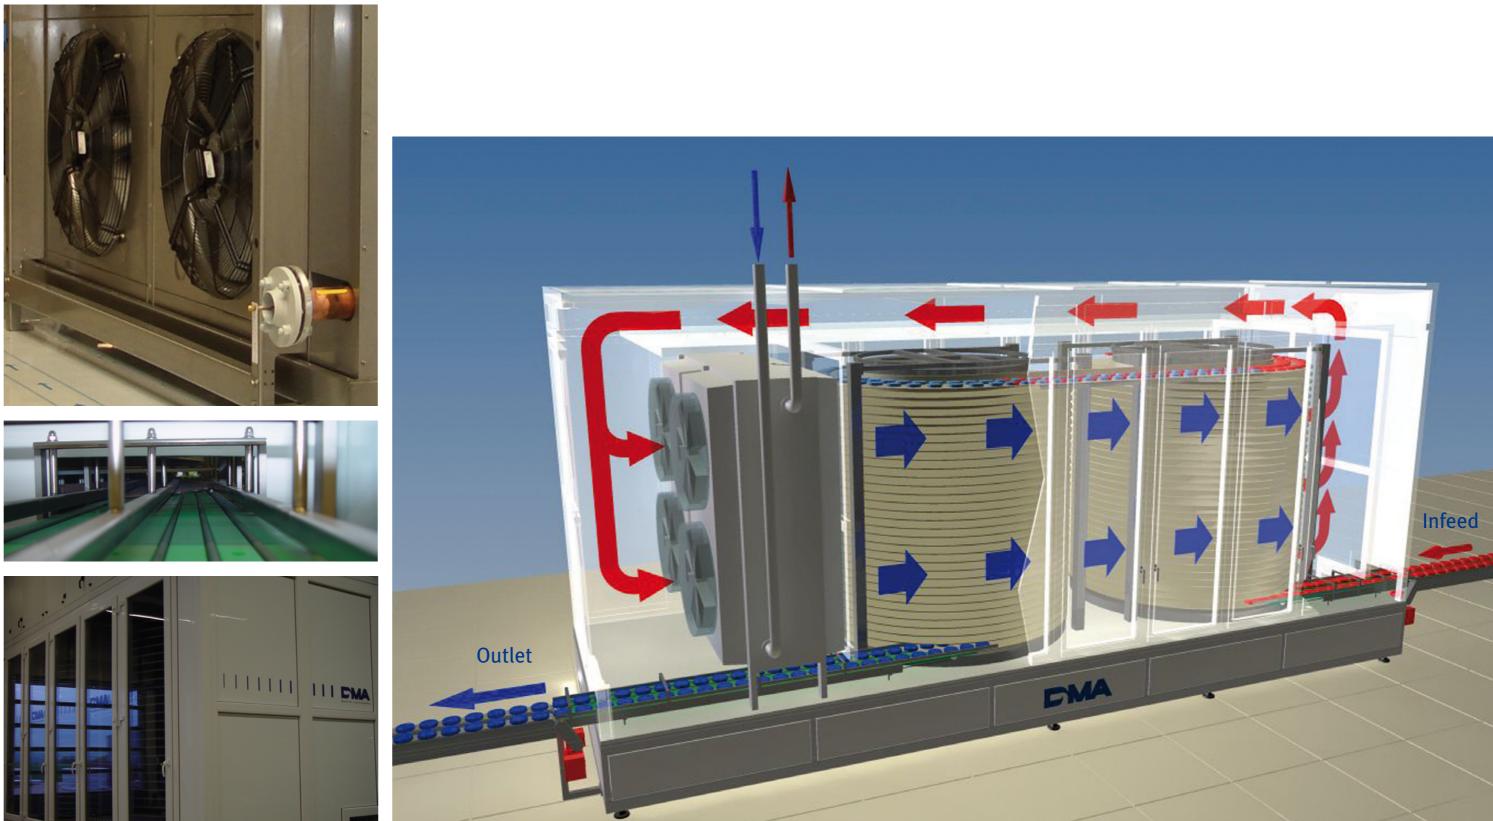

Cooling can be regulated to a particular product. If the output fluctuates, cooling is automatically adjusted.

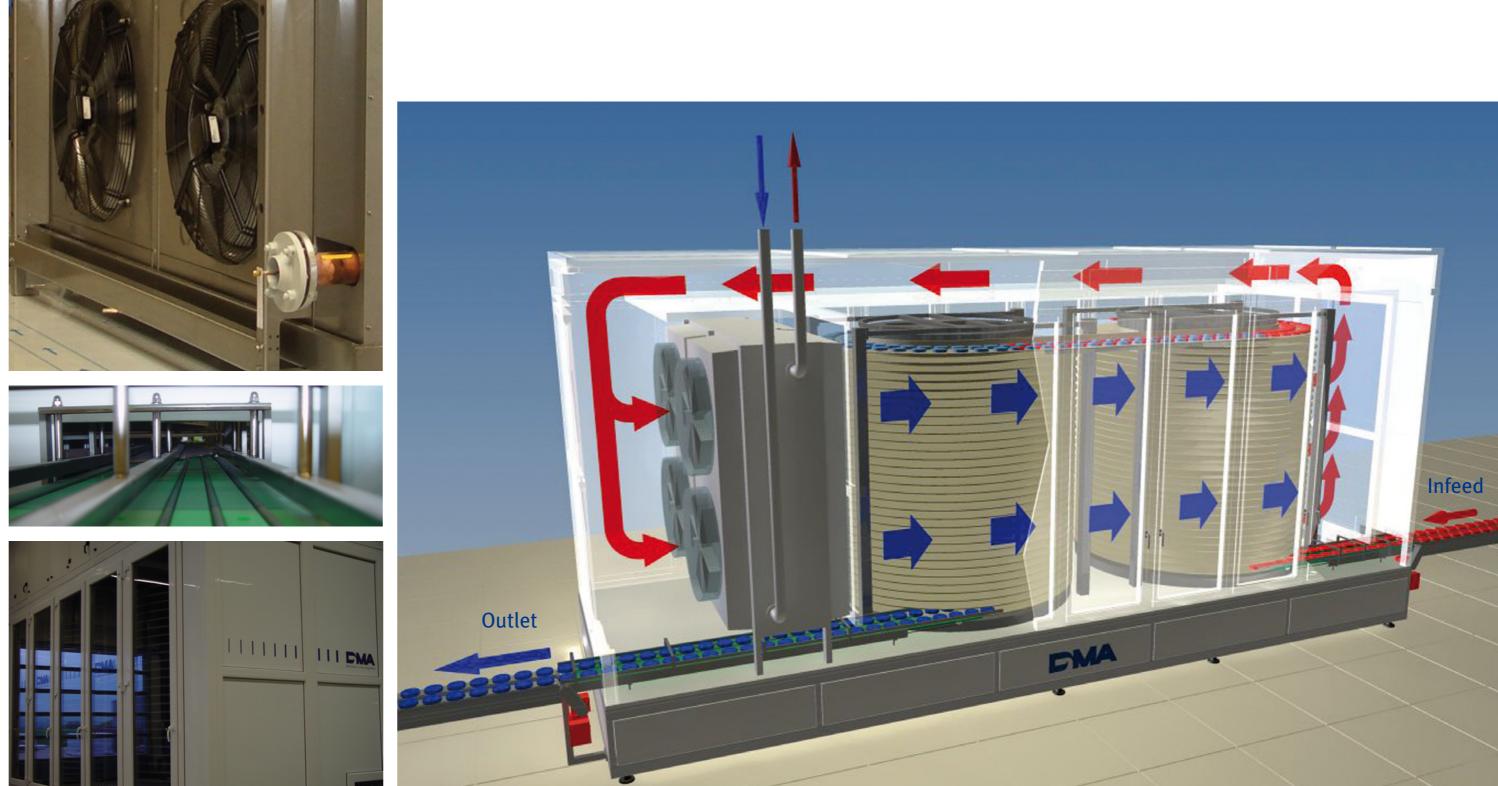

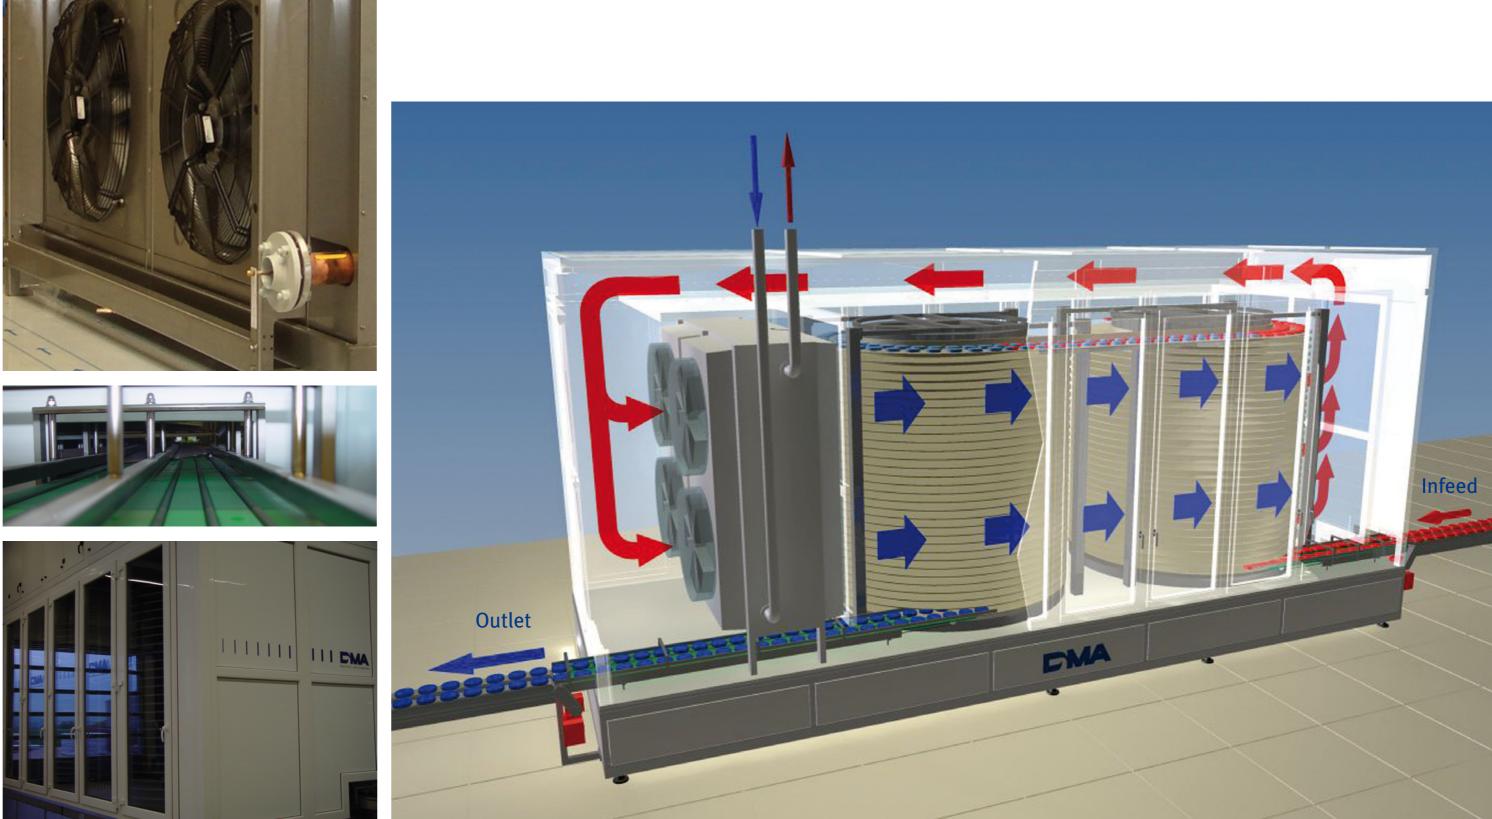

The cooling equipment can be placed in front of, between or above the spirals depending on the available space.

HELIFLEX FLOW COOLING SYSTEMS: EFFICIENT, COST-EFFECTIVE COOLING WITH A CONTINUOUS PRODUCT FLOW

۲
